First week report

By:Jose Cruz, Andrew Hoyle

Our Project

- Our project is about analyzing and classifying the positive and negative parts of our datasets.
- Using machine learning , we will train the neural networks to classify the data and predict the values on data it has never seen before
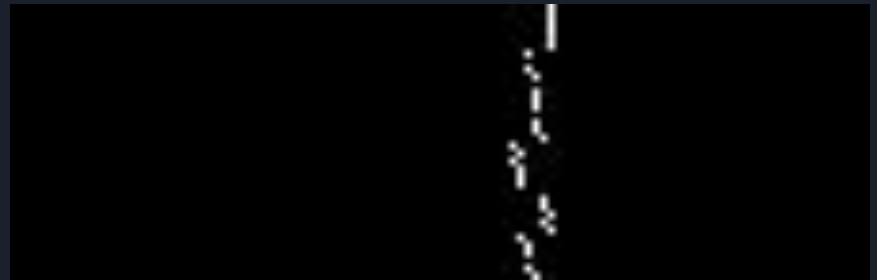

Examples of a Negative dataset

Examples of a Positive dataset

What's Next

- Setting up the convolutional neural network to create a new dataset and run it through logistic regression.
- Look into more research related to our projects
